When to Get Vaccines, Birth to 16 Years

(CDC's Recommended Immunization Schedule)

Concerned about cost?
Free or low cost vaccines are available. Talk to your doctor or clinic.

It's not too late! If your child has fallen behind on their vaccinations, talk to your doctor or clinic to catch them up.

Minnesota law requires written proof of certain vaccinations for children in child care, early childhood programs, and school. However, if a child has a medical reason or if his/her parents are opposed to any or all of the vaccinations, a legal exemption is available.

Children with certain medical conditions may need additional vaccines (e.g., pneumococcal or meningococcal). Talk to your doctor or clinic.

Pregnant? Protect yourself and your baby from whooping cough. Get a Tdap vaccination between 27 and 36 weeks gestation. Talk to your doctor.

*The number of doses depends on the product your doctor uses.

**Two doses for 9 to 14 year olds; three doses for 15 to 26 year olds.

For copies of your child's vaccination records, talk to your doctor. Additional tips for finding records are available at **Find My Immunization Record** (www.health.state.mn.us/people/immunize/miic/records.html) or you can call the Minnesota Immunization Information Connection (MIIC) at 651-201-3980.

Key to vaccine abbreviations

DTaP/Td/Tdap	= diphtheria, pertussis, tetanus	Hib	= Haemophilus influenzae type b
Hep B	= hepatitis B	IPV	= polio
MMR	= measles, mumps, rubella	PCV	= pneumococcal
		RV	= rotavirus
		MCV	= meningococcal
