## What We Heard Common themes from the public:

Support for intersection improvements including signals, new turn lanes, and pedestrian crossings

Woodbury Drive, as the busiest intersection in the study, warrants ongoing reviews for operations and safety improvements.

Agreement that construction of a traffic signal at Eagle Creek Lane in 2026 is needed

While future realignment of Valley Creek Road is supported, the timing should align with development needs. Meanwhile the existing road segment needs to be maintained for safe operations.

A new right turn lane at Manning Avenue would be helpful, but some safety concerns (such as visibility for left turns) would remain
